If you have a window garden and are going to be away from home, or you chronically forget to water your plants, the WayinTop's smart watering kit might be a relatively easy high-tech solution.

This kit combines Pump, Tubing, Soil Moisture Sensor and 1Channel 5V Relay Module in one arduino plant watering system, you can simply plant your flower or your herbs in the pot and insert the soil moisture sensor in the soil.

Soil moisture sensor senses the moisture level of the soil. If soil will get dry then sensor senses low moisture level and automatically switches on the water pump to supply water to the plant.
